The Post Department would like to start preparing to develop a post package. In order to proceed, the Post Dept. will need documentation on how your machine is configured and programmed.

At your convenience, please send us the following items:

- Sample programs showing Milling and Drilling operations.
- A Specification Sheet that will show us speeds, feeds and travel limits for the machine.
- A Working Area diagram that shows distances within the machine. This will allow us to create an accurate description of your machine in GibbsCAM.
- A Complete Programming Manual. We are looking for a machine specific programming manual. A generic control manual will not have the machine's specific G-codes, M-codes, Cycles, or other technical aspects we may need to develop the Post.

We will not be able to start the Post Development process until we receive these items. Please respond to the email you received with any questions or concerns.

If you need to upload the information requested, you can do so using this link: Machine Info Uploads

Thank you,
